## SideWinder Stabilizing and Lifting Device

- Specially Designed Scissor Operation for Rescue Work
- Enclosed Threaded Rod
- Roller Bearings for Smooth Action
- Wide Base - Polymer Coated Bottom
- Tilting Head for Angled Adjustment
- Changeable Heads - Flat and Conical
- Pivoting Carry Handle
- Rated at WLL of 7,500 lbs.
- Lifts from 5.25" to 13.25"
- Attached Clevis for Securing with Ratchet Strap

### Stabilizing and Lifting on All Fours

For quick 2 or 4 point stabilization. The SideWinder can be used to release weight on the suspension eliminating the need to deflate tires. If needed, a partial or total lift of the vehicle can be accomplished easily.

### Stabilizing and Lifting a Side Rollover

Used in conjunction with other stabilization devices, the SideWinder's pivoting heads can adjust to sloping angles for quick action. Tethered to a strut, a vehicle can be lifted using the SideWinder.

### Stabilizing and Lifting a Roof Rollover

Using the SideWinder in a pair under the roof rail, stabilization is efficient and positive. Lifting the rear upward is fast and effective. Placing under A-Post/Hood area lifts the front end as well.

*SideWinder can be operated manually or by power tools (not provided).*
