

Packexe® SMASH

Time Critical Glass Management

Packexe® SMASH Glass Management system provides a remedy to handling both tempered and laminated glass on rescue scenes. Glass, considered a hazard during the extrication process, can finally be handled in a more efficient and safe manner. The SMASH system allows application of specially formulated adhesive that holds glass upon shattering in all weather conditions. The dispenser applies the adhesive film quickly. Perforations on the film then permit easy and exact placement on the surface. Glass can be broken and removed in entire sections eliminating shards and pieces. Proven to strengthen glass up to 42%, Packexe SMASH has eliminated the need to always forcibly break and remove it-just leave in place during the extrication process! A non-perforated hand-roll provides glass management of laminated glass inside as well as outside the vehicle reducing airborne particles. Packexe SMASH-Safe, Easy, Quick glass management system.

SMASH kit Contents:

- 1 dispenser
- 1 SMASH roll, 12.25" x 164', perforated every 4" (fits dispenser)
- 1 SMASH roll, 12.25" x 164', un-perforated (hand application)
